

Keno

The Keno game is played with a traditional 80-numbered ticket and 20 balls whose function is the same as in a standard lottery.

Objective

The objective of Keno is to guess which numbers, between 1 and 80, will be randomly selected by the Keno machine.

The Game

To begin playing Keno, you must select bet amount you wish to play. Once the bet amount has been selected, choose between one and ten numbers you believe will be randomly selected by the Keno machine. To do this, simply click on the desired number in the Keno number grid. A number may be unselected by clicking on the same number again.

Once you have chosen between one and ten numbers, you now select how many games you would like to play consecutively with those selected numbers using the "Play One", "Play Five", or "Play Ten" buttons. The "Play One" button plays the game once, "Play Five" plays the game five times, and "Play Ten" plays the game ten times consecutively. Selecting either the "Play One", "Play Five", or "Play Ten" buttons starts the game.

After each game you may choose to stay with the same spots you played (by clicking on the "Play" button again) or pick new spots on the ticket.

Based on the amount of numbers you select, the possible payouts are shown near the upper left-hand area of the Keno machine in the "Hits" and "Payout" fields.

Payoffs

The payoffs are dependent on the total numbers selected by the player and the total number of matches, as displayed in the chart below.

Numbers Selected	The Odds Based on The Number of Matches									
	1	2	3	4	5	6	7	8	9	10
2					15					
3				2.525						
4			1	5	80					
5			2	10	600					
6			1	8	50	1500				
7				5	15	250	5000			
8				4	8	40	400	10000		
9				2	5	20	80	2500	15000	
10					2	30	100	500	3000	15000

Options

You may turn on/off the Tips, Sound and Music during the game by clicking on the "Options" button located in the lower right-hand area of the console. The option is turned on when the checkbox is checked and it is turned off when the checkbox is unchecked.
